

SPRING/ SUMMER 2026

In today's fast-paced world, where artificial intelligence and the digital sphere are fundamentally transforming our lives, our sense of fashion is being also redefined. The new Spring/Summer Collection 82 from the Butonia-Kahage-Group reflects this shift.

This collection combines advanced laser techniques and innovative structures with natural materials such as corozo and genuine horn.

Additionally, selected eco-friendly and recycled materials are used. A highlight of the collection is the diverse range of metal buttons, which stand out for their versatility and creativity. Alongside these traditional elements, there are new shapes and designs that align with current international trends. Modern materials such as nylon and polyester are also featured, enriching the collection further.

The colors are cheerful and elegant, extending beyond the classic summer and pastel tones to include muted and darker hues, offering a versatile and down-to-earth aesthetic.

Collection 82 showcases how fashion and technology can seamlessly merge to create contemporary yet elegant styles that are both innovative and environmentally conscious. This is the future of fashion.

From shirt buttons to shank buttons, Collection 82 offers everything fashion-conscious individuals could desire.

It not only meets today's fashion demands but also embodies the creative and forward-thinking vision of the Butonia-Kahage-Group.
